plastics

A photograph of a PET bottle production line. Several clear plastic bottles are in various stages of being formed and filled. The background is filled with complex machinery, including rollers, pipes, and structural frames, all illuminated by industrial lights. The overall scene is a busy manufacturing environment.

PET Bottles & Containers

▶ PET Blowing

PET containers are light, damage resistant and easily shapeable, so you can create a multitude of forms. They are particularly good for enhancing product visibility in transparent containers. And PET is fully recyclable, making it even more appealing to image conscious sellers and buyers alike.

Thin wall Injection

► **DRY OFFSET Printing**

To be stored in a cool, clean and dry environment, free of contamination from dirt and odours. Cups are to be stored out of direct sunlight and can also provide high barrier aseptic packaging for those products that require special protection against water, oxygen, light and vapors. Aluminum or plastic lids could be used to complete the protection process.

Our Materials

All our products are made from impermeable, inert, innocuous materials that meet all health and hygiene standards. We use three different kinds of resin to satisfy every single need our clientes may have. Also we have some biodegradable options for those special applications.

We are committed to the high quality and safety standard demanded by the market, in consequence we have certifications that guarantee compliance and continuous improvement in our manufacturing process.

Those certifications ensure our clients to receive safe and reliable products for the food industry inside and outside the country.
